The Archstone Foundation is a private grantmaking organization whose mission is to contribute towards the preparation of society in meeting the needs of an aging population.
The 2012-2013 Biennial Report, “Looking Ahead,” tells the story of the Archstone Foundation’s two-year journey in addressing emerging and unmet needs in the field of aging, and it tells the stories of the projects and older adults the Foundation has supported. In this report we reflect upon the past two years of grantmaking and use the lessons learned to guide the future work of the Foundation.

During the past two years, the Foundation worked to disseminate the results and to wrap-up its five-year initiatives in preventing falls in older adults, preventing elder abuse and neglect, and addressing end of life issues through the support of spirituality within palliative care. In addition, the Foundation through its Responsive Grantmaking, focused on three emerging areas: Aging in Community; Expanding Mental Health Services; and Professional Education and Training.

Our mission would not be fulfilled without the hard work and dedication of our partnerships with social and healthcare service providers and academic institutions.
With these partners, the Foundation seeks to meet the needs of older adults and to promote community-based solutions and statewide improvements.

As California, and the nation, grapples with changing demographics, increased healthcare and workforce needs, system changes, and the desire of older adults to remain in their homes, the Foundation will continue to search for innovations and solutions that address these uncertainties and positively touch the lives of older adults. Thereby, the Foundation continues to remain committed to its mission of preparing society in meeting the needs of an aging population.

On behalf of the Board of Directors,

Robert C. Maxson, Ed.D.  
Chairman

Joseph F. Prevratil, J.D.  
President and CEO
Responsive Grantmaking is the Foundation’s strategy to address the emerging and unmet needs of California’s diverse aging population and those who serve them. It provides a platform for the Foundation to offer direct service support in areas such as transportation, nutrition, and other service areas, while educating and training today’s healthcare workforce. Responsive Grantmaking also enables the Foundation to address important programmatic and policy-related issues. Historically, Responsive Grantmaking has provided the Foundation an opportunity to incubate, contemplate, and to raise awareness concerning important issues in the field of aging, while exploring partners who might also support these important areas.

In fiscal years 2012 and 2013 the Foundation focused a majority of its funding efforts on Responsive
Grantmaking. In particular, the Foundation awarded grants in three emerging areas:

1) Aging in Community;
2) Expanding Mental Health Services; and
3) Professional Education and Training.

In the years to come, the Foundation will continue to utilize Responsive Grantmaking to fulfill its mission. The Foundation will also continue to offer direct service support in the areas of Aging in Community and Expanding Mental Health Services, while educating and training today’s healthcare workforce.

During the past two years, the Foundation awarded 66 grants totaling over $5.1 million through its Responsive Grantmaking program.
Mrs. Pedrosa is an 83-year old widow living alone in Grass Valley, California. Due to heart problems, she has stents and a pacemaker. Mrs. Pedrosa was also suffering from an ongoing dental infection and had difficulty chewing her food. Her doctor recommended she have knee replacement surgery. However, before undergoing surgery, Mrs. Pedrosa needed to have the dental infection addressed. Living on $906 of monthly Social Security and Disability she could not afford to see a dentist.

Thanks to the Dental Lifeline Network of California, Mrs. Pedrosa was matched with a volunteer dentist near her home. The dentist was able to clear her infection and provided a donated treatment worth over $8,000.

In a thank you note to the Program Coordinator, Mrs. Pedrosa wrote, “I am very thankful for the help I received. I love smiling again!”
Nearly 10,000 people will turn 65 every day for the next 16 years, a trend that will have widespread impact across all ages and communities. The majority of older adults desire to age in place, even as they begin to need day-to-day assistance. The influence of these trends will call for innovative long term services and support systems, housing models, and healthcare systems that are able to serve older adults in their community.

In 2012 and 2013, the Archstone Foundation funded a variety of models to enable older adults to remain in their community.

**Low Income Housing and Services Model:** Affordable housing linked with health and supportive services is a promising platform for improving the health of older adults and their ability to age in their communities. An appropriately designed housing environment can provide preventive health services that help avoid falls, unnecessary hospital and re-hospitalization, and institutionalization. The Foundation currently is funding a Learning Collaborative to help affordable housing providers more effectively coordinate health, housing, and social services.
Program for All Inclusive Care for the Elderly (PACE) Model: The PACE model is centered on the principle that it is better for the well-being of older adults with chronic conditions to be cared for in their community whenever possible. PACE participants receive personal care in their homes and transportation to a PACE site for primary medical care, social and recreational activities, and other needed services. In 2012 and 2013, the Archstone Foundation supported three PACE projects.

**Nearly 10,000 people will turn 65 every day for the next 16 years, a trend that will have widespread impact across all ages and communities.**

Shared Housing Model: Home sharing is a unique program that matches adults who want to remain in their own homes with individuals in need of housing. It is a low-cost and mutually beneficial way to meet the housing, financial, and care needs of older adults. Currently, the Archstone Foundation is supporting one shared housing model.
Mr. Cruz is a 67-year old diagnosed with cancer. His rent was twice the amount of his monthly income. Unable to work, Mr. Cruz turned to ALA for help.

Given the need to remain close to his treatment center, and limited resources, Mr. Cruz knew finding appropriate housing would be a challenge. Shortly after enrolling in the Shared Housing Program, Mr. Cruz was introduced to Mr. Diaz, who was living alone and facing financial challenges. Mr. Diaz knew that finding a roommate would provide the additional income needed to remain in his home.

Mr. Cruz and Mr. Diaz met to discuss the idea of home sharing—they have now been home sharing for a year. Mr. Cruz lives close to his treatment center, and pays 60% less rent than when he lived alone. Mr. Diaz’s housing expenses were reduced significantly; he is now able to afford his other living expenses.
As part of the funded programs included within Aging in Community, the Archstone Foundation began an investment in Village models.

Originally started in the Beacon Hill neighborhood of Boston, Massachusetts, the Village concept arose out of older community members’ desire to reside in their own homes, while being able to access services that address their needs related to aging. Villages are self-governing, grassroots, community-based organizations, developed with the goal of enabling people to remain in their own homes and communities as they age.

In June 2010, the Archstone Foundation began its Supportive Communities for Aging efforts, with the goal to enhance the integration of aging services in Southern California in ways that would increase the quality of life for older adults living independently in their community. Four Southern California Villages were awarded grants under this funding opportunity.

In fiscal year 2012, the Archstone Foundation invested $1.3 million in its Creating Aging Friendly Communities through...
the Expansion of Villages initiative to support the Village movement in California. The Foundation funded nine California Village models, technical assistance, and a cross-site evaluation. Technical assistance includes training and mentoring for Village staff on business, marketing, and sustainability practices. The Foundation also hosts convenings for Villages to come together to share successes; problem solve challenges; test new ideas; learn about techniques and strategies to promote sustainability; and to build upon the valuable experiences of one another. The evaluation aims to document key elements for a Village to be sustainable and effective in meeting the needs of its members.

$1.3 million was invested, in Fiscal Year 2012, to support the Village movement in California.
Ms. Price and Mr. Lee are both Santa Barbara Village members. Mr. Lee drives Ms. Price to her weekly Tai Chi class. One week during his regular route to pick up Ms. Price for Tai Chi class, Mr. Lee was unable to reach Ms. Price. After multiple attempts, he contacted the Santa Barbara Village staff to alert them. Moments later the staff received a phone call from Ms. Price. She was calling from the hospital after suffering a fall that morning in her home.

Ms. Price said that this experience made her appreciate the Village and its driver program in a whole new way; she realized that someone in her community is watching out for her. Thanks to the support from the Village, Mr. Lee is now driving Ms. Price to her physical therapy sessions, rather than Tai Chi. Ms. Price is also able to stay in her own home as she recovers because Village volunteers assist her with chores and grocery shopping.
Mental illness is a medical condition that disrupts a person’s thinking, feeling, mood, ability to relate to others, and daily functioning. Depression is a type of mental disorder characterized by an all-encompassing low mood accompanied by low self esteem, and by loss of interest or loss of pleasure in normally enjoyable activities.

Major depression affects 2 to 5% of community dwelling older adults, and 5 to 10% of older adults in primary care settings. Among older adults with chronic medical illnesses, such as diabetes or heart disease, as many as 25% may experience major depression.

In 2012 - 2013, the Archstone Foundation continued its support of the Expanding Mental Health Services projects, which sought to expand and replicate evidence-based mental health services programs in Southern California. Evidence-based programs are proven ways to promote health and prevent disease among older adults.

Evidence-based programs supported by the Foundation included:
1) Programs to treat depression in older adult caregivers;

2) The Healthy IDEAS Program (Identifying Depression, Empowering Activities for Seniors), a community-based program designed to detect and reduce the severity of depressive symptoms in older adults with chronic health conditions and functional limitations;

3) The Improving Mood – Promoting Access to Collaborative Treatment (IMPACT) Program, a collaborative approach to depression care, delivered in a primary care setting; and

4) The Program to Encourage Active and Rewarding Lives for Seniors (PEARLS), a community-based program that seeks to reduce depression by screening older adults; offering problem-solving treatment; and utilizing a depression care manager and supervising psychiatrist.

25% of older adults with chronic medical illnesses may experience major depression.
Asian Americans report higher rates of depressive symptoms than Caucasian Americans, and they have a tendency to underutilize mental health services. Healthy IDEAS is an evidence-based practice designed to detect and reduce the severity of depressive symptoms in older adults through existing community-based programs. Little Tokyo Service Center collaborated with Asian American community partners to adapt and translate Healthy IDEAS for Chinese, Cambodian, Japanese, and Korean immigrant seniors.

Mrs. Sato, who had suffered from depression since the death of her husband three years ago, did not seek help for her emotional pain because she believed, as many Asian immigrants do, that it was simply her fate. Through Healthy IDEAS, Mrs. Sato was able to resume positive activities, like working in her beloved garden.
As recognized in the Institute of Medicine of the National Academies report “Retooling for an Aging America: Building the Health Care Workforce,” between 2005 and 2030 the number of adults age 65 and older in the United States will almost double, and older adults in 2030 will be a more diverse group than older adults today.

California has the largest number of older adults of any state and the numbers continue to increase. There are over 4 million people age 65 and older, representing over 11% of the population. California’s older population is also racially and culturally diverse, with elders of racial and ethnic minority backgrounds accounting for almost 40% of those 65 and older.

These dramatic shifts in the age and ethnic distribution of the population will place accelerating demands upon the healthcare system and upon the healthcare workforce, a system and workforce currently not large enough to meet the growing needs of older persons. It is estimated that by 2030, 3.5 million additional healthcare professionals and direct-care workers will be needed.
In an effort to recognize and meet these growing demands, during 2012 - 2013, the Archstone Foundation continued its support of education and training programs that seek to prepare society in meeting the needs of an aging population. The Foundation supported professional development and training projects on topics of elder abuse and neglect, end of life issues, housing, and mental health needs for older adults. In addition, the Foundation funded training projects that benefit California’s ethnically and linguistically diverse aging population.

By 2030, 3.5 million additional healthcare professionals and direct-care workers will be needed.
Caring Connections is an interdisciplinary intervention to reduce intergenerational and intercultural barriers to communication among caregivers for persons with dementia in nursing homes; and ultimately, to enhance person-centered care. The intervention is a communication training program for caregivers; including nursing aides and family members.

Mrs. Ash has dementia and lives in a nursing home, where her daughter-in-law, Kay, visits daily. Kay participated in Caring Connections, which provided her with therapeutic communication strategies to emotionally connect with Mrs. Ash. Since Kay’s training, she has expressed that her visits have been enhanced by her ability to better communicate and stay connected with her mother-in-law. Kay said, “Good communication techniques provide me the means for much needed human connectedness.”
Looking ahead, the Foundation will continue with Responsive Grantmaking as its primary strategy to address the emerging and unmet needs of the aging population and those who serve them. Through Responsive Grantmaking, the Foundation is able to enhance the integration of aging programs and services in communities in ways that will increase the quality of life for older adults living independently in their community.

Also through its Responsive Grantmaking, the Foundation will consider ways to sustain the important groundwork that has been laid through its past key initiatives.

The Archstone Foundation plans to continue its support of Villages in California to:

1) support consumer driven culture change, as it pertains to the delivery of services for older adults in the community;
2) examine and document the impact of Villages; and
3) identify the key organizational characteristics that will advance the effectiveness and sustainability of Village models.

In the coming years, the Foundation plans to expand its long-standing commitment to family caregiving. A family caregiving initiative might include direct-service programs, caregiver policies, or demonstration projects, among others, that support family caregivers, and the older adults they care for.

Developing the healthcare workforce is also an area of future consideration, with the goal of ensuring that tomorrow’s healthcare workers have the knowledge and skills required to meet the needs of California’s diverse aging population.

Finally, the Archstone Foundation is exploring how it may make the most impactful contribution toward improving depression care for older adults.
Archstone Foundation awarded a total of 66 grants during fiscal years 2012 and 2013. In addition, the Foundation continued to support multi-year grants awarded in prior fiscal years. Organizations, project titles, and the total amounts awarded are listed below.
